## Amendments to the claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of claims:

Claim I (currently amended): A thin film thickness measurement apparatus comprising:

- a light source;
- a first optical fiber, which is a branch type optical fiber;
- a plurality of additional-optical fibers arranged around the first optical fiber; a light receiving unit for directing light from said light source substantially perpendicular to a substrate and for receiving light reflected from said substrate; and
- an analyze unit for analyzing thickness of a thin film of said substrate according to intensity of reflected light received by said light receiving unitoptical fibers, wherein
- (a) the first optical fiber at least one of the optical fibers guides the light from said light source onto a plurality of sites on said substrate and receives light reflected from said plurality of sites, and
- (b) at least one of the plurality of additional optical fibers guides the reflected light from said substrate to said analyze unit; and
- a shutter for selectively blocking the <del>plurality of reflected light received by said branch type-firstat least one of the optical fibers.</del>

Claims 2-9 (canceled)

Claim 10 (original): The thin film thickness measurement apparatus according to claim 1, said analyze unit including

- a spectroscope dividing reflected light from said substrate according to intensity of each wavelength, and
- a calculation unit calculating thickness of a thin film of said substrate according to intensity of each wavelength divided by said spectroscope.

M. Hatanaka et al. U.S. Serial No. 09/471,829 Page 3 of 9

Claim 11 (original): The thin film thickness measurement apparatus according to claim 10, wherein said calculation unit calculates thickness of said thin film by equations of:

$$R = \frac{R(2, 1) + R(1, 0) \times k^{2} + 2 \times \rho(2, 1) \times \rho(1, 0) \times k \times \cos(\gamma)}{1 + R(2, 1) + R(1, 0) \times k^{2} + 2 \times \rho(2, 1) \times \rho(1, 0) \times k \times \cos(\gamma)}$$

$$\rho(2,1) = \frac{n_1 - n_2}{n_1 + n_2}$$

$$\rho(1,0) = \frac{n_0 - n_1}{n_0 + n_1}$$

$$R(2, 1) = \rho(2, 1)^2$$

$$R(1, 0) = \rho(1, 0)^2$$

$$\gamma = 4\pi n_1 d/\lambda$$

where  $n_0$  is a refractive index of said substrate,  $n_1$  is a refractive index of said thin film,  $n_2$  is a refractive index of air,  $\lambda$  is a wavelength of light, and k is an absorption coefficient of said thin film.

Claim 12 (original): The thin film thickness measurement apparatus according to claim 11, wherein said light receiving unit directs light substantially perpendicular to a substrate placed on a robot hand.

Claim 13 (original): The thin film thickness measurement apparatus according to claim 11, wherein said light receiving unit is installed in a neighborhood of an outlet of a gate valve of a film growth apparatus.

Claim 14 (original): The thin film thickness measurement apparatus according to claim 10, wherein said calculation unit calculates thickness of said thin film by equations of:

M. Hatanaka ct al. U.S. Serial No. 09/471,829 Page 4 of 9

$$R(p+1, 0) = \frac{A+B}{1+C+B}$$

$$A = R(p+1, p)+R(p, 0) \times k^{2}$$

$$B = 2 \times \rho (p+1, p) \times \sqrt{R(p, 0)} \times k \times \cos(\gamma(p, 0) + \gamma(p))$$

$$C = R(p+1, p) \times R(p, 0) \times k^{2}$$

$$\rho (p+1, p) = \frac{n(p)-n(p+1)}{n(p)+n(p+1)}$$

$$R(p+1, p) = \rho (p+1, p)^{2}$$

$$\tan \gamma (p, 0) = \frac{D}{E+F}$$

$$D = \sqrt{R(p-1, 0)} \times (1-\rho(p, p-1)^{2}) \times \sin(\gamma(p-1, 0) + \gamma(p-1))$$

$$E = \rho (p, p-1) \times (1+R(p-1, 0))$$

$$F = \sqrt{R(p-1, 0)} \times (1+\rho(p, p-1)^{2}) \times \cos(\gamma(p-1, 0) + \gamma(p-1))$$

$$\gamma (p) = 4 \pi n(p) d(p) \cos \theta(p) / \lambda$$

where  $n_0$  is a refractive index of said substrate, n(p) is a refractive index of the p-th layer of thin film from said substrate, n(p+1) is a refractive index of air,  $\lambda$  is a wavelength of light, and k is an absorption coefficient of said p-th layer of thin film.

Claim 15 (original): The thin film thickness measurement apparatus according to claim 14, wherein said light receiving unit directs light substantially perpendicular to a substrate placed on a robot hand.

M. Ilatanaka et al. U.S. Serial No. 09/471,829 Page 5 of 9

Claim 16 (original): The thin film thickness measurement apparatus according to claim 14, wherein said light receiving unit is installed in a neighborhood of an outlet of a gate valve of a film growth apparatus.

Claim 17 (original): The thin film thickness measurement apparatus according to claim 1, wherein said light receiving unit directs lights substantially perpendicular to a substrate placed on a robot hand.

Claim 18 (original): The thin film thickness measurement apparatus according to claim 1, wherein said light receiving unit is installed in a neighborhood of an outlet of a gate valve of a film growth apparatus.

Claim 19 (currently amended): A thin film thickness measurement method comprising the steps of:

providing a first optical fiber, which is a branch type optical fiber, and a plurality of additional optical fibers, wherein the plurality of additional optical fibers are arranged around the first optical fiber;

directing light from a light source substantially perpendicular to a plurality of sites on a substrate via the firstat least one of the optical fibers;

receiving light reflected from the plurality of sites on said substrate via at least one of the plurality of optical fibers;

utilizing a shutter to selectively block the plurality of reflected light received by said branch type firstat least one of the optical fibers; and

analyzing thickness of a thin film of said substrate according to intensity of said received reflected light.

Claim 20 (original): The thin film thickness measurement method according to claim 19, wherein said step of measuring thickness of said thin film includes the steps of dividing reflected light from said substrate according to intensity of each wavelength, and

M. Hatanaka et al. U.S. Serial No. 09/471,829 Page 6 of 9

calculating thickness of a thin film of said substrate according to said intensity of each wavelength divided.

Claims 21-59 (canceled)
